Welcome to Scriba LLM

First, load your api-keys in the settings page.

Here you can upload your PDF files and convert them to markdown format. You can follow the following steps:

- 1- Upload the PDF using the upload button on the top of the page. 2- After the software has finished analyzing your document, you will some boxes on your PDF around the pictures.

 Please try to change the threshold so that the detection is as accurate as possible. Don't norry if there are some false positive, the LLM will check them before inserting them in the markdown file.
- 3- In the context box add a few words describing what the document talks about. For example, for this document write:

 Technical documentation for this software called ScribaLLM
- 4 Press the button convert to Text and wait the convertion to be complete.

 (Depending on the length of your document, this step may take a while.)
- 5 The converted file will be shown. You can both download it and and add it to the chatbot's memory.

 Note that sometimes the warkdown text is not properly displayed due to some limitations of the webpage. Try to download it and open on a proper warkdown engine, like the one found in Obsidian.
